Data Availability Statement: Data will be available in an open Dryad repository: http://datadryad.org/share/LINK_NOT_FOR_PUBLICATION/Sqv1RJ19OMW_MkxaOOWTsS7DT1q5Y4gE-pqzVPn5HJo

Author Contributions: Ben Makhlouf performed data analysis and wrote the manuscript, Daniel E. Schindler directed the project and analysis, secured funding, and helped to develop the manuscript. Timothy J. Cline contributed to analysis and code development, Diego Fernandez performed laboratory microchemical analysis, Janessa Esquible directed otolith dataset collection, Avery Hoffman directed the field sampling program as part of the Bethel Test Fishery. All co-authors reviewed the final manuscript.

Keywords: Alaska, Biodiversity, Fisheries, Otolith, Salmon, Strontium, Trade-off

Acknowledgements:

We thank the Alaska Department of Fish & Game, particularly Sean Larson and Zachary Liller for coordinating otolith sampling at the Bethel Test Fishery and for feedback on the study design and manuscript. Funding for this work was provided by the Arctic-Yukon-Kuskokwim Sustainable Salmon Initiative. Joseph Spaeder of the AYK-SSI also provided feedback on the study design. We also thank the local community members who supported otolith removal and collection as well as the ONC fisheries program staff members who helped support data collected and distributed sampled fish to elders, disabled, and widowed community members. This work was made possible by the efforts of Dr. Sean Brennan, who was instrumental in the collection of these datasets and was motivated to push forward on the boundaries of using isotope-based methods to explore ecological processes in Alaska salmon.

Statement on Inclusion

Our study was conducted in direct collaboration with management stakeholders as well as communities in the region. Members of native council (ONC) and management agencies collaborated on data collection and appropriate dissemination of fish which were collected for samples to community members. Stakeholders from both the native council and management were provided opportunity for formal feedback and contributed as co-authors to the final manuscript.
