

Figure 1: Strontium isoscape of the Kuskokwim River Basin (French et al., 2020) displaying the spatial variation in $\text{Sr}^{87}/\text{Sr}^{86}$ ratios. Darker colors indicate lower relative isotope ratios whereas lighter colors indicate higher values. Isotope ratios across the basin range from 0.7042 to 0.7107, with a general trend towards higher values at the top of the watershed.
